# Flexible Design. Sustainable use.

True to this motto, Minka has been producing stairs in the heart of Austria since 1952. While the focus was initially primarily on the production of attic stairs, in recent decades the production of system staircases has also grown steadily. This has enabled us to build up an extensive product range: From highly insulated and fire-retardant loft stairs to space-saving and spiral staircases to galvanised outdoor stairs. Over the past 70 years, we have established ourselves in the national and international staircase market and are now one of the largest staircase manufacturers in the world.

With the help of our state-of-the-art production facilities and in-house powder coating department, we are able to flexibly adapt our products to any requirements and to ensure a perfect price-performance ratio. The modular system of Minka system staircases allows customers to choose between different types of wood, metal colours, assembly variants and sizes. Thanks to the high quality standards, excellent insulation technology and the use of durable and low-wear materials, Minka stairs are extremely sustainable not only in production but also in use. Whether it's a space-saving staircase, a spiral staircase or an attic staircase - you buy a Minka for life.
